Reconstruction of the Bradshaw Road Overpass of I-95

The Bradshaw Road Overpass of I-95 is more than 50 years old. The Overpass needs to be lengthened and raised slightly to provide sufficient room for the northbound ETL improvements. To avoid future disruption, the new Overpass will also provide sufficient room for a possible future southbound ETL extension, which is currently being studied.

The new Overpass will include:
- One lane in each direction, the same configuration as currently exists
- Stone pattern finish
- Water quality improvements

About Construction

Construction of the Bradshaw Road Overpass is anticipated to begin in January 2019 and be completed in June 2020. To provide a safe environment, the Overpass will be closed during the construction period. This also allows for the shortest schedule for the new bridge construction. All traffic will be detoured to the Raphel Road Overpass during this time. Access to all private residences will be maintained throughout the duration of the project.
