

Alternating single-lane traffic on Winters Run Road under I-95 begins May 10

Beginning Tuesday, May 10, 2022, Winters Run Road under I-95 will switch to an alternating traffic pattern maintained in a single lane using a temporary traffic signal. This alternating, single-lane traffic pattern is expected to be in effect until fall 2023. The new traffic pattern is needed to complete the widening of the I-95 Northbound Bridge over Winters Run Road and Winters Run Stream. Minor traffic delays are anticipated, and drivers using Winters Run Road should consider alternate routes. Access to all private residences will be maintained throughout the duration of the project.

Alternating Single-Lane Traffic at Winters Run Road Underpass

The widening of the I-95 Northbound Bridge over Winters Run Road is part of the Maryland Transportation Authority's (MDTA) \$1.1 billion I-95 Express Toll Lanes (ETL) Northbound Extension Program to relieve congestion and improve travel along the I-95 Corridor into Harford County. In addition to the I-95 northbound roadway improvements, the program will replace several bridges that are more than 50 years old and provide new noise walls. The ETL Northbound Extension will be completed in multiple segments and expected to open to traffic in 2024 through MD 152 and in 2027 through MD 24.
