

I-95 ETL NORTHBOUND EXTENSION

I-695 Northbound ETL Ramps

As part of the MDTA's \$1.1 billion program to relieve congestion and improve travel along the I-95 corridor in Baltimore and Harford Counties, the MDTA is constructing ramps that will connect I-695 (Baltimore Beltway) to the northbound ETL lanes on I-95. These ramps will allow travelers on I-695 to travel north via the ETL lanes, which will extend over 12 miles to MD 24 by late 2027.

The project will add ramps at the existing interchange of I-695 and I-95 in northeast Baltimore. By handling nearly 7,000 vehicles per day once open, the new ramps will provide relief for the existing northbound ramps that can experience congestion at the merge point onto I-95. Motorists will have the option of using the general-purpose lanes at no cost or paying a toll to use the ETLs, which will be managed to maintain relatively congestion-free traffic flow.

The proposed ramps will be located entirely within the existing interchange with minimum impacts during construction to local communities and traffic on I-695 and I-95. MDTA has also committed to conducting stream restoration works within the existing interchange as part of this project.

About Construction

Design began in mid-2022 with construction anticipated to begin in mid-2026.

The Maryland Transportation Authority (MDTA) will be extending the Express Toll Lanes (ETL) along northbound I-95 between MD 43 and MD 24, completing more than 10 miles of improvements. These important traffic-relief initiatives will benefit Marylanders throughout the Baltimore region by giving drivers a safer and more efficient commute. The I-95 ETL north of Baltimore have been very successful, and we are pleased to be able to deliver even more traffic relief.

In addition to the I-95 northbound roadway improvements, the MDTA will replace multiple bridges that are more than 50 years old and provide several new noise walls. The I-95 ETL Northbound Extension Program will be completed in multiple segments.
