

Nice/Middleton Bridge (Southbound US 301) Driver's Update

Since March 2022, two-way traffic has operated on the northbound US 301 lanes so crews can remove the toll plaza, which is no longer in service. Access to the E-ZPass Maryland Customer Service Center will remain from Orland Park Road until the new bridge opens.

- Southbound shoulders are closed through the project work area.
- Stay alert, obey posted speeds and keep moving through the work area.
- Traffic delays are possible throughout the work area.
- Tolls are now collected via an overhead electronic toll gantry located prior to the old toll plaza structure for southbound traffic only.
- Always properly mount your E-ZPass transponder and keep your account up to date to receive the lowest toll rate.
- All-electronic tolling is statewide
