

Project Purpose

- ▶ The project study began in 2018 and has included two public open house events in 2018 and 2019, as well as ongoing opportunity for public information and comments. As presented in previous open houses the purpose of this project is to facilitate the safe and efficient flow of local, commuter, and commercial vehicle traffic movements of people and goods along I-95 in the Belvidere Road area, while providing a cost-effective and environmentally sensitive multi-modal transportation system that supports existing and future travel demand, land use and development efforts that are consistent with state and Cecil County planning policies.
